

BUILDING ON THE BEST

- SAFETY
- COMPLIANCE
- CONVENIENCE

Focused on improving safety and compliance in the operating room?

Take the first step toward automation in the perioperative environment to standardize medication inventory, accountability, dispensing and preparation to support safe practices.

The Codonics Safe Label System™ has teamed up with the Omnicell Anesthesia Workstation™ to give you a winning solution. The Anesthesia Workstation conveniently and securely stores all medications and supplies needed for a full day's cases. Adding the Codonics Safe Label System allows you to reduce medication errors made during the selection, preparation and administration of injectable and intravenous medications, helping to ensure medication accuracy prior to, during and after surgery.

- Reduces the three most common medication errors made in the OR: vial and ampoule swaps, mislabeling, and syringe swaps
- Labels are Joint Commission-compliant and color-coded based on American Society of Anesthesiologists (ASA) defined drug classifications

Learn more about the Anesthesia Workstation:
855-306-7926 www.omnicell.com

Leading hospitals using Safe Label System and Anesthesia Workstation have reported increases in efficiency and accuracy, resulting in reduced calls to the Pharmacy from the OR, and are now compliant with all aspects of The Joint Commission.
