

SLS Implementation

Set your staff up for success by employing the Codonics Implementation Team

Your healthcare enterprise has stepped up its commitment to patient safety and compliance with the purchase of the Codonics Safe Label System (SLS). **Codonics Implementation Team (CIT) can be there to support you through the installation, training and launch of SLS in your facility.**

Each CIT member is an expert in SLS formulary preparation, configuration, deployment and maintenance. The CIT brings an in-depth understanding of the tasks needed to ensure a successful SLS deployment. They will work with your team to define the best path to bring pharmacy and anesthesiology together for a seamless integration into your facility.

From installing the Administrative Tool application software to setting up the SLS Point of Care Systems, your entire team will be trained to be your in-house SLS experts. The Codonics team will work with your facility's staff to match the needs of the SLS system with your policies and procedures. Live training sessions over the web and on-line tools allow the CIT to build a flexible schedule for your Pharmacy, IT and anesthesia staff, enabling them to become SLS experts when they are available -- at their convenience.

Once the CIT is on site, hands-on training is provided for Pharmacy, Anesthesiology, IT, and BioMed/Clinical Engineering.

Codonics will make sure SLS is seamlessly adopted into your workflow
